## Acoustics

### Flats and Apartments

It is now possible to build flats and apartments with Celcon Blocks throughout the build.

Robust Details E-WM-6, E-WM-10, E-WM-13, E-WM-15, E-WM-23 and E-WM-24 for separating walls, can be used for flats and apartments and when used in conjunction with the Robust Detail separating floor solution E-FC-4, which is one of the most common and popular floor types, again there is no need for pre-completion testing of the whole flat.

### Robust Details for Acoustic Performance

Robust Detail for Part E of Building Regulations is a separating wall or floor construction which has been assessed and approved by RDL.

In order to be approved, each Robust Detail must:

- be capable of consistently exceeding the performance standards given in Approved Document E to the Building Regulations for England and Wales
- be practical to build on site
- be reasonably tolerant to workmanship

To find out more about Robust Details and how they are used within H+H aircrete constructions see our Products and Applications Guide.
