### H+H in Action

H+H UK have been manufacturing aircrete using Pulverised Fuel Ash (PFA) for nearly 60 years. There is a total commitment throughout the business to reduce the impact of our business on the environment and to produce products that are better for the environment than other conventional types.

Sustainability does not rest with production and products. H+H UK work hard to address the skills issues within the construction industry:

We have a dedicated Demonstrator who travels the country training site based operatives in the correct use of our products, particularly our Thin-Joint System and RåBuild Method, where labour and material waste on site can be minimised.

By working with the CITB we have established nationally recognised training modules for thin joint blockwork with the bricklaying vocational courses. Training of college lecturers was a key part of this process.

Health and Safety of employees is of paramount importance. We have established our own initiative, called Safety Plus, which attempts to eliminate accidents and health and safety hazards wherever possible. All staff have been through a comprehensive training programme associated with Safety Plus.

Additionally many staff have undertaken health and safety training administered by the Chartered Institute of Environmental Health and have achieved a Level 2 Award in Health and Safety in the workplace.
